

HOW WELL DO YOU KNOW YOUR NEIGHBOR?

**Peter A Anton -UCLA Vivisector Killing Monkeys for Profit
7777 Hollywood Blvd. #309, Los Angeles, 90046
(323) 850-0188 panton@med.net.ucla.edu**

Did you know that your neighbor Peter Anton is currently overseeing horribly cruel and fraudulent experiments on non-human primates? UCLA vivisector Peter A. Anton is responsible for all kinds of hideous things done to primates under the pretense of studying “rectal microbicides”.

These toxic substances are forced into the rectums of innocent primates restrained in draconian body restraint devices. What kind of a sick, twisted pervert would order this to be done to other sentient beings? Primates do not get human HIV, and shoving microbicides up their anus will not cure human AIDS. Every legitimate physician knows that clinical research on human patients and other non-animal methods are the only way to see if these microbicides will indeed work in humans. Primates just like the one in this picture above, suffer in misery and agony because of the sick and twisted Peter A. Anton.

In their natural environment, monkeys would travel almost ten miles a day and could run 35 miles per hour. But instead, Anton imprisons them in small, barren, stainless steel cages where they will be experimented on and killed.

Physicians (those with Medical Degrees,) admit that this study will do NOTHING in regards to helping a single human AIDS patient. But UCLA and their Frankenstein researcher, Peter Anton, pull in massive amounts of grant money to do these fraudulent, immoral and perverted experiments on primates.
