

**UCLA Vivisector NELSON FREIMER
Torturing monkeys for Profit**

Center for Neurobehavioral Genetics
695 Charles E. Young Drive South, Room 3506 –L.A., CA. 90095
Lab Fax Number:(310)-794-9613 Lab Phone Number:(310)-794-9571

Nelson Freimer is an animal experimenter (vivisector) at UCLA who experiments on imprisoned monkeys for human conditions such as bipolar disorder, Tourette's syndrome (TS), manic depression, absolute pitch, temperament and response to stress. Vivisectors induce stress in primates by depriving them of water and separating mothers from their infants, causing them severe anxiety.

These imprisoned primates are also experimented on by Freimer's colleague Lynn Fairbanks to study "impulsivity" disorder and even bank robbery! Another of Freimer's colleagues Edythe London, addicts primates to Crystal Meth and injects them with liquid nicotine. UCLA turns primates into "tweakers" - while rehab centers lack funding to help humans who want to get off the drug.

If you can't see that vivisectors are evil individuals who invent ever more grotesque ways to torture animals while they lap at the troughs of the government grant gravy train, and if you can't feel compassion for the innocent primates being wantonly and gratuitously tormented by such monsters, then perhaps you can feel outrage that your hard-earned taxpayer dollars are used for fraudulent science and to supply luxurious homes and fancy cars for quacks and thugs who retard true progress in human medicine.

PRIMATES SHOULD NOT BE USED IN EXPERIMENTS!
